DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- i. Group I, claim(s) 1-2, drawn to drawn to an organic electronic component with two functional layers made of the same material and differing in electrical properties.
- ii. Group II, claim(s) 3-18, drawn to a single-step conversion process for altering the electrical properties of organic materials.

2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the common technical feature is an organic functional layer with different electrical properties. This cannot be a special technical feature under PCT Rule 13.2 because the element is shown in the prior art. Brown (US Patent 5,629,530) shows an organic material comprised of at least two functional layers abutting each other which were produced from the same material (TTF/TCNQ) but having different

Art Unit: 2891

conductivity, such as a semi-metallic layer (Elements 21 or 24), a p-type layer (Element 22), and an n-type layer (Element 23). Brown further teaches that these functional layer with different conductivity can be made by a process different than a single process of converting a functional layer through partial reaction, since Brown discloses that the layers can be formed by a multiple step process of vapor deposition without any partial reaction (Col. 6, Lines 5-30).

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 2891

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
